FOR IMMEDIATE RELEASE

BRONX-LEBANON HOSPITAL CENTER OF NEW YORK SELECTS FORHEALTH'S INTELLIFILL I.V. PHARMACY IV AUTOMATION TECHNOLOGY

-- ForHealth Technologies' IntelliFill i.v. syringe preparation system part of Bronx-Lebanon Hospital Center's patient care, cost efficiency strategy --

DAYTONA BEACH, Fla., September 23, 2004—ForHealth Technologies, Inc., a leader in automated devices for intravenous drug preparation, announced today that Bronx-Lebanon Hospital Center of Bronx, N.Y. will install and use IntelliFill i.v., ForHealth's i.v. pharmacy robotic technology to place additional emphasis on patient safety and efficiency.

“Bronx-Lebanon has placed its confidence in ForHealth's IntelliFill i.v. device to advance the safety and efficiency of its pharmacy operations,” said Rod Wolford, chairman and CEO of ForHealth Technologies, Inc. “This partnership is another validation and confirms once again the growing acceptance of our pharmacy automation technology to make healthcare safer and more affordable. We are extremely delighted to be working collaboratively with them to benefit a huge region in the major metropolitan area of New York.”

IntelliFill i.v. automates the compounding and labeling of intravenous doses in syringes at speeds that can only be achieved through automated processes. By employing bar code scanning, vision systems and weight confirmation steps, and by providing final products that are identified with barcodes, IntelliFill i.v. reduces medication errors. Furthermore, by providing a Class 10 compounding environment, IntelliFill i.v. assures that the final i.v. product produced is of the highest quality. The system also promotes long-term hospital cost savings by preparing the final intravenous products in a syringe instead of an i.v. bag.

– more –

With more than four million patient-use syringes prepared in hospitals by its IntelliFill i.v. robots, ForHealth understands the rigorous requirements for accuracy, productivity and sterility. ForHealth's innovations are setting new standards for hospital pharmacies in patient safety, cost efficiency and compliance with new regulations such as U. S. Pharmacopoeia <797>. With over 24 US patents in process, ForHealth is well-positioned to continue to bring technological innovation to the i.v. compounding process.

"We at Bronx-Lebanon Hospital Center are continually striving to bring the future in technology directly to our facilities," said Lawrence Schiller, MS, RPh, director Pharmacy Services, Bronx-Lebanon Hospital Center." "The installation of ForHealth's IntelliFill i.v. will certainly help us move forward in our effort."

Bronx-Lebanon is the largest voluntary, not-for-profit health care system serving the South and Central Bronx, with 847 beds at two major hospital divisions (the Concourse and Fulton); a nursing facility for AIDS and geriatrics patients; and an extensive BronxCare network of ambulatory medical practices that has reinforced Bronx-Lebanon's essential role as Doctor to the Community.
