

IntelliFill™ *i.v.*

Human Intelligence, Robotic Performance

Wayne Gillis, MBA, BA, RN

Associate Vice President of Clinical and Nursing Services

**Leesburg Regional Medical Center,
Leesburg, Florida, April 2007**

- Provides comprehensive medical services to the greater Orlando area
- Named one of Top 100 Hospitals in the United States for five consecutive years
- Recipient of the 2003 Orlando Sentinel's Top 100 Companies for Working Families award
- Installed ForHealth's IntelliFill *i.v.* in 2004
 - Initially went live in the Surgical Inpatient and Cardiovascular Critical Care Units
 - At the time, Wayne Gillis, RN was the executive director of Critical Care; he has since been promoted to Associate Vice President of Clinical and Nursing Services

Benefits of syringe infusion:

"I like the convenience factor and the flexibility syringe-based administration gives our nurses. By using syringes, we control fluid amounts when infusing antibiotics or other drug therapies, which is a big win for us. On top of that, it's much more cost effective, which is icing on the cake."

Testimonial

Continued efforts to advance patient safety:
"Our use of barcoded syringes is instrumental to our overall strategy and has prepared us for scanning doses at the bedside."

The Cardiovascular Critical Care Unit's transition to syringe administration:

"The change to syringes was incredibly straightforward; there really was very little learning curve."

ForHealth's support team assisted LRMC's nursing staff during implementation:

"ForHealth's team is very knowledgeable and attentive. Our staff always got what they needed. Once we implemented the use of syringes, we really didn't need any additional support and we had next to no issues. It's been pretty painless."
