

IntelliFill™ i.v.

Human Intelligence, Robotic Performance

Ginger Beck, RN, BSN

Memorial Health System Colorado Springs, Colorado, April 2007

- Memorial Health System has been a cornerstone of the Colorado Springs community since 1904
- 475-bed facility
- Installed ForHealth's IntelliFill i.v. in Q4 2004
 - Initially went live in the Adult Acute and Critical Care Units
 - Currently averaging production of approximately 12,500 syringes weekly
 - Ginger Beck provides direct patient care to medical/surgical patients; she is actively involved in the Clinical Practice Council

Time savings and ease of use of syringe infusion:

"Using the IntelliFill syringes is so much easier and quicker, whether we're infusing via IV push or an IV pump. As nurses, we're pressed for time, so syringe administration really helps us provide quality care to our patients and balance our overall workload."

Testimonial

Memorial's patient safety initiatives are ongoing:

"Our sister hospital, Memorial North, will start using bedside barcoding in the coming weeks and we expect the system to come to us at Memorial Central soon thereafter. Our use of barcoded IntelliFill syringes will be a key component of our new medication administration process. We're looking forward to playing a key role in the success of this initiative."

Commenting on Memorial's implementation and nurse acceptance of IntelliFill i.v.:

"Our implementation was well executed and the transition to syringe infusion on the units went very smoothly. Our nursing staff definitely welcomed the use of the IntelliFill syringes because they helped us on so many levels: sheer convenience, speed and reduced risks of medication errors."
